

**TECNOLOGIE DI ISOLAMENTO SISMICO:
un cambio di mentalità per la sicurezza non più rinviabile**

ASCOLI PICENO - 22 Maggio 2018

Stato dell'arte dei dispositivi per la protezione sismica

Ing. Carlo Galli

STORIA DEL GRUPPO

Freyssinet Products Company Italia è una società di ingegneria che nasce dall'esperienza della società Alga conosciuta ed apprezzata in tutto il mondo da oltre **50 anni**, per i suoi apparecchi di appoggio, giunti di dilatazione, sistemi di post-tensione e apparecchiature antisismiche.

Freyssinet Products Company Italia fa parte del gruppo Soletanche-Freyssinet. Freyssinet è stata fondata oltre **75 anni** fa da Eugène Freyssinet, l'inventore della precompressione.

Il gruppo Soletanche Freyssinet è leader mondiale nelle lavorazioni del suolo, nelle **strutture** e nel **nucleare**

Dissipazione - ELASTOPLASTICI

Giunti - SFX

ISOLAMENTO SISMICO

APPROCCI PROGETTUALI

L'isolamento sismico alla base consiste nell'inserire **elementi deformabili** in cui **concentrare il danno** che permettono di **disaccoppiare il moto terreno** e della struttura

L'isolamento sismico alla base è l'unico sistema che permette di **proteggere** sia la **struttura** che le **parti non strutturali** ed il contenuto

ISOLAMENTO SISMICO

APPROCCI PROGETTUALI

Edificio non isolato

Edificio isolato

APPROCCIO – PROGETTO IN DUTTILITA'

APPROCCI PROGETTUALI

- **Struttura campo plastico**
- **danneggiamenti**
- **Operatività NON garantita dopo sisma**
- **Necessità di riparazione dopo sisma**
- **Protezione elementi non strutturali**

APPROCCIO - ISOLAMENTO SISMICO

APPROCCI PROGETTUALI

- **Struttura campo elastico**
- **NO danneggiamenti**
- **Operatività garantita dopo sisma**
- **NO riparazione dopo sisma**
- **Protezione elementi non strutturali**

- L'isolamento sismico è il sistema più efficace per proteggere una struttura dal terremoto.
- L'adeguamento sismico di edifici esistenti per mezzo dell'isolamento alla base minimizza la necessità di rinforzi strutturali.
- L'adeguamento sismico per mezzo dell'isolamento alla base ha un impatto molto basso sull'attività svolta all'interno dell'edificio e in alcuni casi può essere eseguito anche senza l'interruzione dell'attività stessa.
- L'adeguamento sismico per mezzo dell'isolamento alla base ha un costo limitato e in ogni modo più economico di altri sistemi.
- L'adeguamento sismico per mezzo dell'isolamento alla base semplifica moltissimo la progettazione.

EFFETTI ISOLAMENTO SISMICO

APPROCCI PROGETTUALI

$$T = 2\pi \sqrt{\frac{M}{K}}$$

- INSERIMENTO NELLA STRUTTURA DI ELEMENTI DEFORMABILI
Aumento del Periodo Proprio delle struttura
- INSERIMENTO NELLA STRUTTURA DI ELEMENTI DISSIPATIVI
Aumento dello smorzamento di energia

PRODOTTI ISOSISM®

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

DISSIPATION

CONNECTION

ISOLATION

JUNCTION

Freyssinet ISOSISM® è una gamma completa di dispositivi per la protezione sismica progettati, costruiti e testati in Italia da FPC ITALIA e comprende:

**ISOLATORI IN GOMMA AD
ALTO SMORZAMENTO**

**ISOLATORI IN
GOMMA/PIOMBO**

**ISOLATORI A PENDOLO
SCORREVOLE**

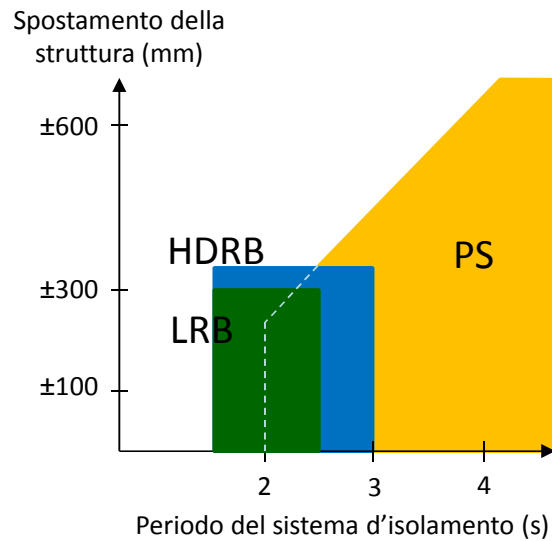

AMORTIZZATORI IDRAULICI

CONNETTORI SISMICI

L'isolamento sismico degli edifici

FEMA 454, 2006, designing for earthquakes, a manual for architects

Height versus base dimension curve for structures having a period of 1.5 s

HDRB – High Damping Rubber Bearing

- Isolatore in gomma armata realizzato da strati di gomma e piastre di acciaio
- La miscela possiede capacità dissipative
Smorzamento $\xi=10\% - 16\%$
- La miscela é deformabile trasversalmente
deformazioni massime $\tan\gamma=2,5$
- LEGGE COMPORTAMENTO

$$F = Kr \cdot D$$

- EFFETTO isolamento

Aumento periodo ★★☆☆
 Dissipazione ★☆☆☆

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

HDRB - SMORZAMENTO VISCOSO EQUIVALENTE

δ
Smorzamento viscoso equivalente

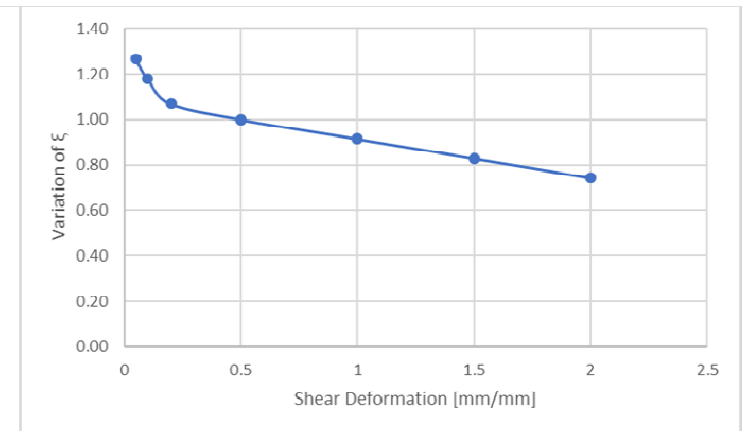

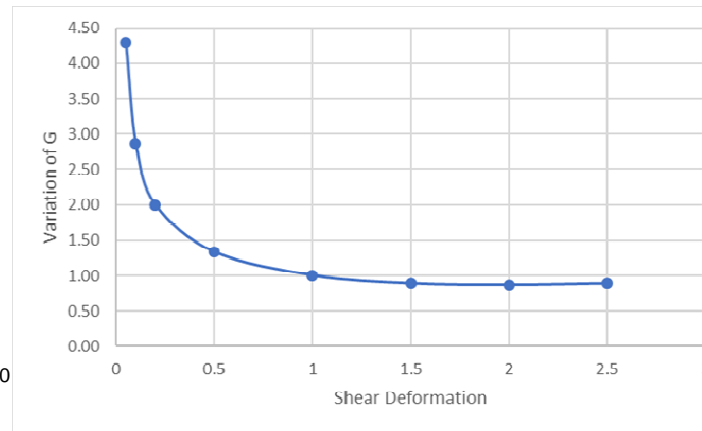

E_d
Energia dissipata per ciclo

W
Lavoro esterno

LA RIGIDEZZA E' INFLUENZATA DAI SEGUENTI FATTORI

- Temperatura
- Deformazione a taglio
- Invecchiamento (dipende dal tipo di mescola. Solitamente l'invecchiamento causa un aumento della rigidità di circa il 15-20% in 50 anni).
- Carico verticale
- Frequenza (effetto non rilevante)

LRB – Lead Rubber Bearing

- Isolatore in gomma armata realizzato da strati di gomma e piastre di acciaio che contiene nucleo in piombo
- Dissipazione é fornita dalla mescola e dello snervamento del nucleo di piombo

Smorzamento $\xi=15\% - 35\%$

- Deformabile trasversalmente

deformazioni massime $\tan\gamma=2,5$

- LEGGE COMPORTAMENTO

$$F = K1 \cdot dy + K2 \cdot (Dmax - dy)$$

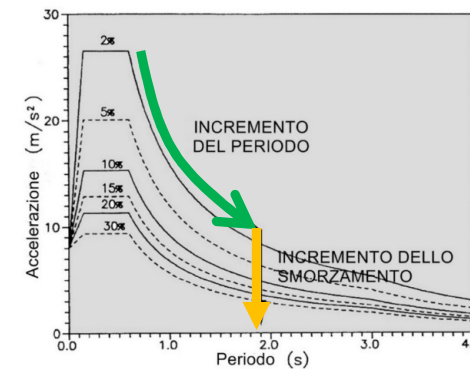

- EFFETTO isolamento

Aumento periodo ★ ★ ★

Dissipazione ★ ★ ★

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

PS – Pendulum System

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

1. Piastra superiore
2. Superficie di scorrimento primaria inox
3. Materiale di scorrimento ISOGLIDE
4. Piastra mediana
5. Superficie di scorrimento secondaria inox
6. Piastra inferiore

PS – Pendulum System

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

Gli isolatori a pendolo ISOSISM® si basano sulle elevate caratteristiche meccaniche del materiale di scorrimento speciale ISOGLIDE® risultato di un programma di ricerca in collaborazione con il Politecnico di Milano

Il materiale ad attrito controllato ISOGLIDE® ha le seguenti peculiari caratteristiche:

- Coefficiente di attrito controllato significa che l'attrito reale corrisponderà a quello specificato entro una tolleranza ristretta.
- Eccezionale resistenza all'usura e alle alte temperature.
- Resistenza caratteristica a compressione molto alta: 180 MPa

Il coefficiente di attrito nominale consigliato è dell'ordine del 4,5 – 5 %

Il raggio di curvatura effettivo da utilizzare in progetto tra 3.500 e 4.000 mm

PS – Pendulum System

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

- Dispositivo metallico con piastre concave in cui scorre piastra contenente materiale di scorrimento
- Pendoli doppia o singola superficie
- Dissipazione é fornita dal materiale di scorrimento

Smorzamento $\xi=15\% - 35\%$

PS – singola superficie

PS – doppia superficie

PS – Pendulum System

LEGGE COMPORTAMENTO

$$F_H = \mu \cdot V + \frac{V}{R} \cdot D$$

$$K_{eff} = \frac{F_H}{D} = \left(\mu \cdot V + \frac{V}{R} \cdot D \right) / D$$

$$T_{eff} = 2\pi \sqrt{\frac{RD}{(D + \mu R)g}}$$

$$\varepsilon_{eff} = \frac{2}{\pi} \left[\frac{\mu}{\mu + \frac{D}{R}} \right]$$

EFFETTO isolamento

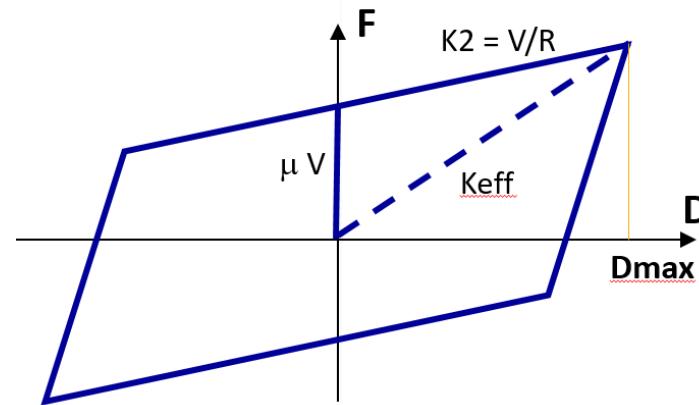

Aumento periodo

Dissipazione

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

VANTAGGI dell'isolamento con PS – *Pendulum System*

- Periodo di oscillazione é costante, non cambia con i carichi variabili
- Forza e rigidezza orizzontale sono proporzionale al carico agente

$$V \downarrow \quad F_H ; K_{eff} \downarrow$$

- Centro delle masse e centro delle rigidezze concidono

- La rigidezza é dipendente so

$$\text{HDRB} \quad F = K_r \cdot D \quad \rightarrow$$

$$\text{LRB} \quad F = K_1 \cdot dy + K_2 \cdot$$

$$K_{eff} = \frac{F_H}{D}$$

- Periodo dipende dalla massa

$$T_{eff} = 2\pi \sqrt{\frac{V}{K_{eff} g}}$$

↑ AZIONE SISMICA

TIPOLOGIE DI DISPOSITIVI E COMPORTAMENTO

PENDULUM SYSTEM

- La rigidezza é proporzionale al carico verticale

$$F_H = \mu \cdot V + \frac{V}{R} \cdot D$$

$$K_{eff} = \frac{F_H}{D} = \left(\mu \cdot V + \frac{V}{R} \cdot D \right) / D$$

- Periodo non dipende dalla massa

$$T_{eff} = 2\pi \sqrt{\frac{R D}{(D + \mu R) g}} \quad M?$$

MARCATURA CE

EN15129

- È obbligatoria in tutti i Paesi dell'Unione Europea nei quali sia stata recepita la norma armonizzata
- Implica la certificazione del Sistema di Qualità ISO 9001
- Implica il regolare svolgimento di audits ai produttori da parte di un Organismo Notificato a tutto il processo di produzione (fornitori qualificati, materie prime certificate, ecc...)
- Implica la realizzazione di test prototipali alla presenza dell'Organismo Notificato
- Per i dispositivi antisismici, se i materiali, i carichi, gli spostamenti oppure uno dei parametri di progetto varia più di una definita percentuale, ➔ i test prototipali vanno ripetuti
- I produttori devono certificare le prestazioni (DOP)
- I dispositivi possono circolare liberamente all'interno dei Paesi dell'Unione Europea

CERTIFICATE OF CONSTANCY OF PERFORMANCE
2204-CPR-0507.1.IS

In compliance with Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation or CPR), this certificate applies to the construction products

LEAD RUBBER BEARINGS
TRADE NAME ISOSISM LRB,

(Product characteristics are detailed in the Annexes of this certificate.)

Placed on the market by **FREYSSINET INTERNATIONAL ET CIE**
280 avenue Napoléon Bonaparte – CS 60002, 92506 RUEIL MALMAISON, FRANCE
Phone: +33 01 47 76 79 79, fax: +33 01 47 76 79 79,

Produced by **FREYSSINET PRODUCTS COMPANY ITALIA SpA**
Manufacturing plant: Via per Lungavilla 43, 27054 Montebello della Battaglia, PAVIA, ITALY,
Phone: +39 0383 892931, fax: +39 0383 892932, e-mail: enzo.gazzaneo@freysinet.com

This certificate attests that all provisions concerning the assessment and verification of constancy of performance described in Annex ZA of the standard

EN 15129:2009

for the performances set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the constancy of performance of the construction products.

This certificate was first issued on 18th November 2016 and will remain valid until 24th July 2017 as long as neither the harmonised standard, the construction products, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

Executive Director,
Dipl. Eng. Genica ANTOHE

* This certificate is valid only together with annex/annexes.
18th November 2016

ICECON CERT is a product certification body accredited by RENAR (accreditation certificate no 0028 OC) and notified at the European Commission under the no NB 2204 for the assessment and verification of constancy of performance of construction products. ICECON CERT reserves the right to maintain, withdraw or suspend the validity of this certificate, if the initial conditions for assessment and verification of constancy of performance are not maintained when the annual surveillance is performed. ICECON CERT is located at: Via S. Francesco 1, PO Box 3-33, 02162, BUCHAREST, phone: +4021 202 85 01, fax: +4021 202 31 49, www.iceconcert.ro, icecon@icecon.ro

TEST

TEST

- NTC 2017 prevede che tutti i **Dispositivi** siano dotati di **marcatura CE**

La nuova NTC 2017 ha recepito la EN 15129 per la tipologia delle prove ma non per la quantità (sempre 20% della produzione)

- TEST in accordo alla **EN 15129**
- **Ente certificatore indipendente** →
 - verifica processo produttivo e
 - corrispondenza tra prestazioni isolatori e proge
- **Tipologie di test:**
 - **ITT** – test di qualifica →
 - test prototipale
 - verificare caratteristiche isolatori
 - **FPC test** – test di accettazione →
 - controllo produzione (dal 5% al 20% del numero totale di una singola fornitura)
 - verificare la costanza delle prestazioni
