LIMITI DI APPLICAZIONE

Step ratio (1/1, 1/2, 1/3, 1/5)
Flow type: NAPPE or SKIMMING

Positive features

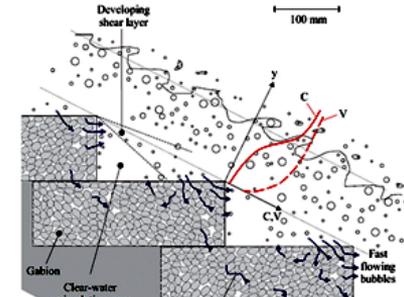

- better stability
- dissipation on each step (stilling pool reduced)

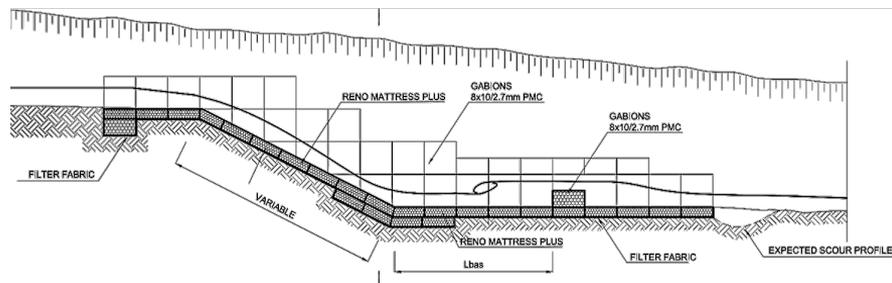

Critical issues

- possible damage/abrasion on the steps
- determination of energy on each step & residual difficult
- the water can move stones hitting the step, causing damage

SLOPED WEIR

DROP

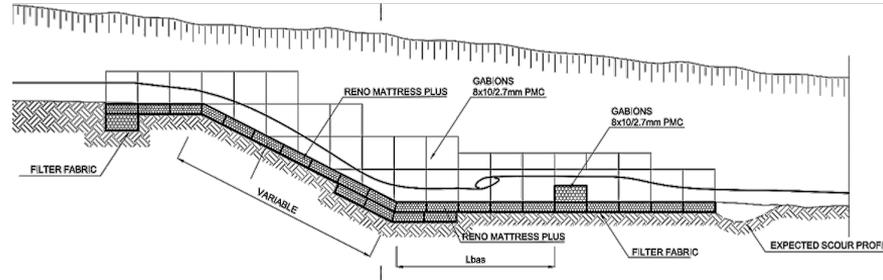

STEPPED WEIR

A SCIVOLO

SINGLE VERTICAL
DROP

LIMITI DI
APPLICAZIONE

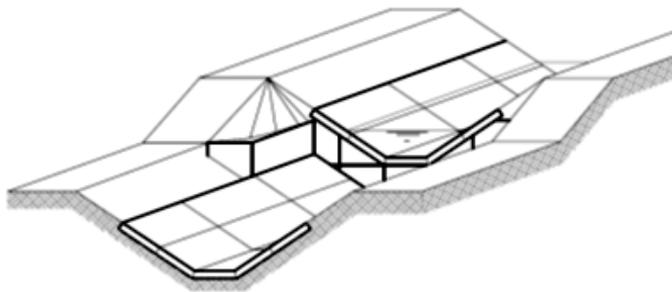

$q = Q/L = 0.5-5 \text{ m}^3/\text{s}/\text{m}$
Slope ratios (1/2, 1/3, 1/4)
Total spillway height
2-3-4-5m

RIVESTIMENTI DI CANALI A GRADONI MULTIPLI (DROP STRUCTURES)

TIPOLOGIE DI BRIGLIE IN GABBIONI

Applicazioni

SFIORATORI LATERALI

SFIORATORI LATERALI

CASSE DI ESPANSIONE

Le casse di espansione sono opere di accumulo dei volumi idrici che consentono di ottenere la riduzione della portata di colmo di un'onda di piena attraverso il temporaneo invaso di parte del suo volume

Le casse possono essere in **linea** o in **derivazione**
